

BUGATTI E-SCOOTER

1924

tribute to the classic

Innovation
Evolution

RESEARCH

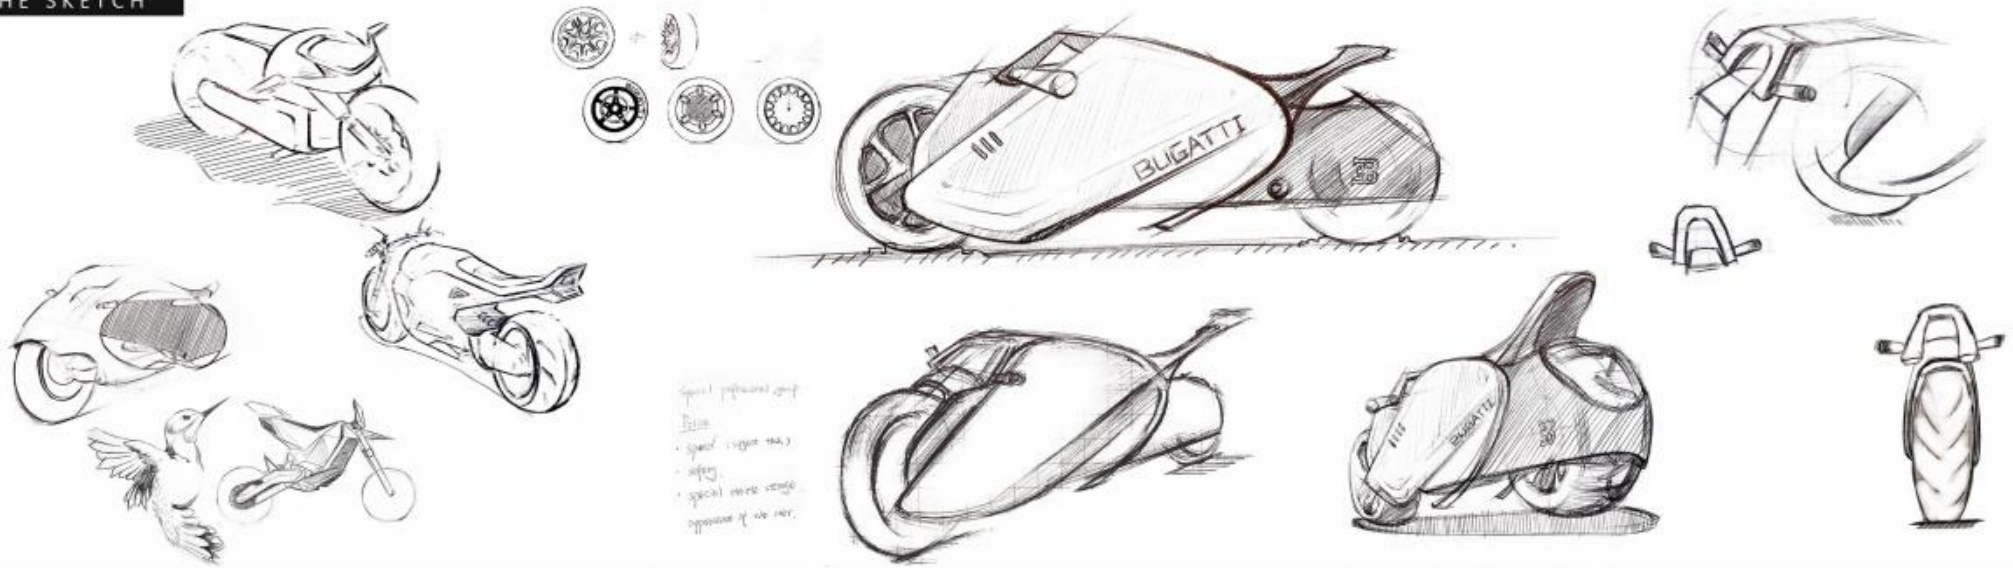

- Police used motorcycles
- speed
- safety
- intelligent

- Bugatti classic features
- curve
- Air intake grille

THE SKETCH

Wireless intelligent connection between car body and helmet. The driver can view the map through the LED projection on the helmet mask without affecting the driving (the map reflects the alarm location or mission patrol location);

Before the driver gets on the vehicle, he only needs to put the numbered tag with the chip close to the control panel to unlock the motorcycle. This effectively prevents the driver from being stolen or robbed by criminals when he is not next to the motorcycle.

RENDERING

When the car body is impacted by external force, it will be automatically reported to the headquarters to confirm the driver's safety;

The car body carries a GPS navigation system to ensure the safety of the police when performing tasks, and can locate the police position with the headquarters in real time;
